

Prince Nwaimo

DevOps & Cloud Platform Operations Engineer

United Kingdom | 07304492790 | nwaimoprince12@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

DevOps & Cloud Engineer with 2+ years' experience designing, automating, and supporting secure cloud infrastructure across UK SaaS and technology environments. Skilled in AWS, Terraform, Kubernetes, CI/CD automation, IAM security controls, and cloud observability solutions using Prometheus and Grafana to enhance platform reliability and operational performance. Experienced in incident response, root cause analysis, production change management, and cloud governance aligned with UK GDPR, NCSC security principles, and enterprise engineering standards.

CORE COMPETENCIES

Cloud Infrastructure Engineering, DevOps Engineering, AWS Cloud Services, Infrastructure as Code (IaC), Terraform, Kubernetes Administration, CI/CD Pipeline Automation, Cloud Platform Operations, Cloud Security & IAM, Infrastructure Automation, Configuration Management, Containerisation (Docker & Kubernetes), Cloud Monitoring & Observability, Incident Management & Root Cause Analysis (RCA), Production Support, Release & Change Management, Git Ops Workflows, Performance Optimisation, Cross Functional Collaboration

TECHNICAL SKILLS & TOOLS

Amazon Web Services (AWS), EC2, S3, IAM, VPC, AWS Secrets Manager, AWS CloudWatch, Cloud Infrastructure, Cloud Governance, Terraform, Ansible, GitHub Actions, Infrastructure as Code (IaC), CI/CD Pipelines, Git, Git Ops Workflows, Infrastructure Automation, Deployment Automation, Kubernetes, Docker, Docker Compose, Container Management, Kubernetes Workloads, Microservices Architecture, Prometheus, Grafana, AWS CloudWatch, Application Monitoring, Infrastructure Monitoring, Alerting, Observability, Performance Monitoring, Incident Response, Root Cause Analysis (RCA), Identity & Access Management (IAM), Least Privilege Access Control, Cloud Security, Production Support, Change Management, Configuration Management, Linux Administration, Operational Troubleshooting

WORK EXPERIENCE

DevOps & Cloud Platform Operations Engineer | Plousios Gigantas

Jan 2026 - Present

United Kingdom

Manage and optimise production cloud infrastructure across AWS environments, supporting secure, reliable SaaS platforms through infrastructure automation, Kubernetes operations, CI/CD delivery, monitoring, and cloud governance practices.

- Resolve AWS infrastructure configuration issues by investigating Terraform state drift, correcting resource definitions, variables, and outputs across 50+ cloud resources, improving infrastructure consistency and supporting reliable deployment workflows.
- Strengthen cloud security posture by reviewing IAM configurations, replacing excessive wildcard permissions with least privilege access policies, and securing 15+ AWS identity and storage controls in line with UK GDPR, NCSC security principles, and internal governance requirements.
- Support Kubernetes based application environments by diagnosing container failures, deployment issues, and service availability problems across 4+ microservices, improving application resilience through pod troubleshooting, readiness probe adjustments, and operational remediation.
- Maintain CI/CD delivery pipelines using GitHub Actions by resolving workflow failures, integrating AWS Secrets Manager for credential management, and supporting 20+ monthly deployment activities across development and production environments.
- Implement and maintain observability solutions using Prometheus, Grafana, and AWS CloudWatch, creating service dashboards and operational alerts across 30+ application and infrastructure metrics to support proactive incident detection and platform reliability targets.
- Collaborate with engineering, security, and product stakeholders to manage production changes through Git based workflows, contribute to incident reviews and root cause analysis, and improve operational processes through documentation, knowledge sharing, and continuous service improvement.

- Automate infrastructure provisioning and operational workflows using Terraform and scripting practices, reducing manual environment setup activities across 3+ deployment environments and improving consistency between development, testing, and production configurations.
- Monitor and troubleshoot cloud platform performance issues through AWS CloudWatch, Prometheus, and Grafana dashboards, analysing 40+ daily operational alerts and events to support faster incident triage, service reliability, and proactive platform maintenance.

Operational Coordinator / Operations Support | Aspire People Ltd

Mar 2026 - Present

United Kingdom

Delivered structured classroom supervision and operational coordination within fast paced UK education environments, maintaining accurate records, supporting stakeholder communication, and ensuring continuity of daily activities across teaching teams.

- Improved classroom reporting and administrative processes by maintaining attendance records, activity documentation, and operational updates across 100+ weekly student interactions, strengthening data accuracy and supporting effective decision making.
- Coordinated communication between teaching staff, administration teams, and students, managing 15+ daily operational queries and escalations while improving information flow, issue resolution, and collaborative working practices.

DevOps & Automation Engineer | Semicolon

Sept 2023 - Mar 2025

Nigeria

Engineered cloud automation solutions across AWS development and staging environments, delivering infrastructure provisioning, deployment automation, and operational support for application delivery teams.

- Automated infrastructure provisioning workflows using Terraform modules and Ansible playbooks, reducing manual environment setup effort by 35% while improving configuration consistency across repeatable deployments.
- Built and optimised GitHub Actions CI/CD pipelines by integrating automated linting, testing, and deployment controls across 3+ application environments, accelerating software delivery workflows and improving release confidence.
- Provisioned and configured AWS infrastructure components including computer, networking, and application services, executing 20+ infrastructure changes through version controlled workflows aligned with DevOps best practices.
- Implemented monitoring and logging capabilities using AWS CloudWatch and Docker logging tools, analysing 50+ monthly system events to identify performance issues, support troubleshooting, and improve platform visibility.
- Diagnosed deployment failures, container issues, and application errors through structured troubleshooting and root cause analysis (RCA), resolving recurring operational issues across 5+ service components.
- Partnered with software engineers and technical stakeholders to improve DevOps practices, document operational procedures, share automation knowledge, and strengthen continuous improvement initiatives.
- Provisioned and automated AWS cloud resources including EC2, S3, IAM, and VPC configurations using Terraform and Ansible, reducing environment preparation time from manual setup cycles and supporting infrastructure delivery across 10+ cloud resources.

Vice Principal | Bright Excellence College

Jan 2018 - Aug 2022

Nigeria

Led day to day operational coordination, staff administration, reporting processes, and service delivery activities within a multidepartment education environment, demonstrating transferable leadership, stakeholder management, and process improvement capabilities.

- Improved administrative workflows by digitising record management and reporting processes across 300+ student records and operational files, strengthening data accuracy, documentation control, and information accessibility for decision making.
- Coordinated staff communication, performance support activities, and operational planning across 25+ teaching and support staff, improving collaboration, issue resolution, and consistency of service delivery through structured processes.

EDUCATION

MSc Environmental Health and Safety | University of Port Harcourt

2021 – 2024

CERTIFICATIONS

AWS Certified Cloud Practitioner | KCNA: Kubernetes and Cloud Native Associate | LFS101: Introduction to Linux | LFS250: Kubernetes and Cloud Native Essentials | Cisco Networking Basics

PROJECTS

AWS Infrastructure Automation Project

AWS, Terraform, CloudFormation, Docker, Kubernetes, CloudWatch

Infrastructure as Code Demo with Terraform & Local Stack

Terraform, Local Stack, AWS Services, NGINX, VPC, S3

Security Monitored Microservice Stack

Docker, Docker Compose, FastAPI, Prometheus, Grafana, Falco

CI/CD Deployment Pipeline Project

GitHub Actions, GitHub Pages, Docker, CI/CD Automation

KEY ACHIEVEMENTS

- Optimised CI/CD delivery by maintaining GitHub Actions pipelines supporting 20+ monthly production deployments, improving release reliability through automated workflows, secure secrets management and deployment validation.
- Strengthened cloud reliability and security by implementing monitoring across 30+ infrastructure metrics, resolving Terraform configuration drift across 50+ AWS resources and applying least privilege IAM controls to secure 15+ cloud services.
- Automated cloud infrastructure provisioning across 3+ deployment environments using Terraform and scripting, reducing manual provisioning effort by 35% while standardising deployment workflows and improving environment consistency.
